

Computer Braille Code

There are two standards of representation of computer code with braille:

The **Braille Authority of North America (BANA)** is the standardizing body of English Braille orthography in the United States and Canada. It consists of a number of member organizations, such as the Braille Institute of America, the National Braille Association, and the Canadian National Institute for the Blind.

- adding dot 7 subtracts 32 from the ASCII value;
- adding dot 8 adds 128 to the ASCII value;

The following table assumes the 8-bit data is encoding text in the CP437 character set used on the IBM PC.
